

## Abstract

In a protection panel (100) for electronic device display window provided with a protection panel main body (1) composed of transparent resin and with a decoration layer (9) having a transparent window section (8a), a transparent lower electrode (2) is formed on an upper surface of the protection panel main body (1). The protection panel main body is bonded, in its peripheral portions, to a transparent resin film (3) on a lower surface of which a transparent upper electrode (4) is formed via an air layer in a position opposite to the transparent lower electrode (2). The decoration layer (9) is formed on at least one surface of a transparent resin cover film (8) bonded to an upper surface of the transparent resin film (3).
